

Certify on Your Own Clock

Code your entire payments system in a weekend!

TSYS progressively seeks out endeavors to support partners who place a high value on efficiency, convenience, security and reliability. In an ongoing effort to exceed your expectations, we are proud to offer the new TSYS Parse ToolSM, designed to help VARs quickly deliver future-proof EMV[®] solutions to the market.

What You Need to Know

TSYS has developed a proprietary solution that will guide POS developers through integration with tremendous ease. The TSYS Parse Tool not only accommodates EMV certifications, but has been built to support all of your TSYS projects. The tool allows you to pretest at will, making your experience more efficient and extremely convenient.

Developed by TSYS, this innovative tool takes the guesswork out of certification testing by deciphering extensive, time-consuming transactions for you. Conveniently integrated with TSYS' current certification environment, you can access with ease – no additional hoops to jump through – using the TSYS Partner Portal, your one-stop developer resource. This secure tool is always within reach, both day and night, whenever it's most beneficial for you. The TSYS Parse Tool empowers VAR partners to:

- **Test a full range of authorization and response scenarios**
- **Eliminate errors and gain productivity with real-time results**
- **Complete magstripe development in hours rather than days**
- **Significantly reduce EMV certification steps and time**
- **Reduce overall implementation costs**
- **Increase your speed to market**

Plus, the TSYS Parse Tool allows VARs to validate their payments ecosystems in a familiar, user-friendly workspace that allows for a true unattended testing environment– making it even easier to certify your TSYS payments solution.

Expedite Your EMV Solutions

The TSYS Parse Tool was designed with our valued partners in mind, offering an improved EMV certification experience. To specifically maximize EMV testing efficiency, we've built a special component within the TSYS Parse Tool. The EMV decoder ring quickly reads and deciphers Tag Length Value (TLV) codes, which include EMV, giving developers a more in-depth analysis of EMV transactions. This decoder ring not only immediately identifies coding errors, but also provides concise, clear-cut direction for a more efficient, streamlined, trouble-shooting process.

As a whole, the TSYS Parse Tool dramatically improves the quality, efficiency and speed of card and payment testing, giving VARs the peace of mind that their POS solutions will qualify for TSYS certification on the first attempt. Gain an edge on the competition by offering your merchants a quick-to-market payments solution that will enhance their customers' overall experience.

Becoming TSYS certified can provide opportunities to expand your merchant base, improve merchant retention and provide secure solutions to your merchants. This can translate into potentially increased revenue and a greater partnership value for you.

We understand the cost, time and complexity you're facing. That's why when you are certifying your payments solutions with TSYS, you'll pay considerably less than with other payments processors. We have your interests in mind – not your wallets.
